BRISTOL

Integrated Assessment of Geoengineering Proposals

- Six universities and the MetOffice
- Inform the emerging debate about geoengineering by addressing the gaps in our knowledge about effectiveness and side effects of geoengineering schemes.
- Assessing both solar and carbon geoengineering proposals (SRM and CDR)
- Integral to the assessment process is active and ongoing engagement with stakeholders, including science and policy experts and the general public, to produce an objective and informed policy-relevant report.

Carbon Geoengineering

- Terrestrial proposals:
 - Biochar/biomass
 - Biomass energy with carbon sequestration
 - Afforestation/reforestation
 - Air capture for fuel

Thank you
